TRIPWIRE®
IP360

WHAT'S NEW IN TRIPWIRE IP360 7.5
INNOVATING ENTERPRISE VULNERABILITY MANAGEMENT

Increase efficiency through more reliable and effective enterprise vulnerability management to reduce risk and operating costs. Tripwire® IP360™ 7.5 offers easier scan management capabilities designed for better security and compliance on medium to large size enterprise networks.

HIGHLIGHTS
» Avoid credential troubleshooting and redundant tasks
» Scan on your terms by scheduling, starting, suspending or activating scans as needed
» Efficiently access scan data for audit preparation
» Simplify management and streamline deployment

MORE RELIABLE
Save time and enable better security using the new Network Credentials widget. Tripwire IP360 7.5 helps you avoid credential troubleshooting by allowing you to test credentials before running vulnerability scans. Now you can rapidly identify assets to which the credentials were successfully applied, unsuccessfully applied or not applicable, and quickly make changes to credentials directly from the widget.

SCAN ON YOUR TERMS
The new Scan History widget in Tripwire IP360 7.5 allows you to instantly repeat a previous scan in one click, or activate a suspended scan to avoid losing already completed work. New scheduling options allow you to schedule one or more recurring scans on weekly or monthly intervals.

EFFICIENTLY MANAGE VULNERABILITIES
Tripwire IP360 7.5 enables more efficient vulnerability management with new capabilities designed for vulnerability management on large, multi-segment networks. Efficiently configure network configurations using tools for importing and deleting network configurations in bulk, and quickly determine if a specified IP address exists within a network profile using a new search function. Enable co-management access to vulnerability audit information by allowing specified users read-only access to scan history data.

BETTER COMPLIANCE AND AUDIT PREP
With Tripwire IP360 7.5 you can determine vulnerability compliance status at a glance and easily export scan data for audit preparation. The new Scan History widget in Tripwire IP360

7.5 helps you save time by referencing scan history to avoid redundant scans, and provides important information about scan status including duration, host count and average risk score.

ENHANCEMENTS AND PERFORMANCE IMPROVEMENTS
Tripwire IP360 7.5 includes 30 new features and improvements, including the ability to configure static routes for new Device Profilers before they are connected to the network, as well as support for virtual appliances on Hyper-V 2012 R2 in compatibility mode.

In summary, Tripwire continues to innovate and augment Tripwire IP360 as the leading enterprise-class vulnerability management solution to help connected organizations reduce their cybersecurity risk and protect against advanced cyber threats—from the data center to the cloud.

ADVANCED THREAT PROTECTION, SECURITY AND COMPLIANCE

◆ Tripwire is a leading provider of advanced threat, security and compliance solutions that enable enterprises, service providers and government agencies to confidently detect, prevent and respond to cybersecurity threats. Tripwire solutions are based on high-fidelity asset visibility and deep endpoint intelligence combined with business-context, and enable security automation through enterprise integration. Tripwire's portfolio of enterprise-class security solutions includes configuration and policy management, file integrity monitoring, vulnerability management and log intelligence.
